Optolith Character Generator and Manager

Welcome to the repository for Optolith, a desktop application for The Dark Eye 5th Edition. Nice to see you here! 👋🏻

Install

You can download the app here (German page) or here here (English page) (same app on both pages). You'll get an installer for Windows with Auto Update support and a DMG for Mac. For Linux, you get an AppImage, which *should* support Auto Update but it doesnt seem to work currently. You also get a tar.gz if you don't like AppImage.

It is available for Windows 7+ as well as for Linux (Ubuntu 12.04+, Fedora 21, Debian 8) and macOS 10.9+ x64.

Goal

Optolith was built and is developed based on a few key criteria:

- A player should be able to create characters without additional cost.
- A player should take care of the more important parts of a character – the personality and background – instead of keeping track of prerequisites and AP.
- Creating a character should be as easy and as intuitive as possible to focus on the actual stats.

With those criteria in mind, we further enhance the app.

Contributing

Info on reporting bugs, getting help, contributing code and more can be found in the Contributing Guide!
